LIGHTER FLUID

Maston lighter fluid is suitable for igniting fires, such as barbecue charcoal and firewood.

Lighter fluid makes it easier and faster to ignite, for example, charcoal in a grill. One bottle of lighter fluid is enough for several uses. It is convenient to spray onto the target, absorbs quickly, and ignites easily.

Instructions for use:

Spray the lighter fluid evenly over the charcoal or firewood and allow it to soak in. Ignite with caution. Do not pour the fluid directly onto flames or hot surfaces, as it may ignite suddenly with a flare.

Tip: Grill only when the coals are glowing.

Storage:

Store in the original packaging, protected from heat and freezing. Keep out of reach of children, in an upright position, and tightly sealed.

Warning!

Even a small amount of ingested lighter fluid may cause life-threatening lung damage. Pouring the fluid onto a hot grill or glowing coals may result in a sudden flare-up.

These changes are mainly stylistic, ensuring consistency in punctuation and phrasing, but your original text is already quite clear and understandable.
